Project Description

The Career Services Application is an advanced online platform designed to offer a comprehensive career services experience for job-seeking candidates and employers. This robust system allows students to create and regularly update their portfolios while enabling employers to post job openings effortlessly. By leveraging this platform, users can efficiently search for and connect with potential job opportunities and candidates, streamlining the job headhunting process. The system significantly enhances the job-seeking experience by empowering candidates to customise their profiles according to market demands, while enabling employers to easily shortlist potential employees based on their specific requirements.

Role of team members

Sr No.	Name	Roles and Responsibilities
1	Anurag Agarwal	Scrum Master
